

Chemicals & Process

Installations Under Challenging Conditions, Certification Included

SAFETY FIRST, PERFORMANCE ALWAYS

INDUSTRY CHALLENGES

- Safety & regulatory compliance
- Handling of corrosive, toxic, and hazardous process fluids
- Welding, leak-tightness, and mechanical integrity
- Full documentation & traceability

AXE PROCESS EXPERTISE

- MASE-certified company
- Carbon steel, stainless steel, and engineered plastic piping
- Heavy fabrication and structural steelwork
- Installations in classified hazardous areas and high-constraint environments

SOLUTIONS & CAPABILITIES

- Utility and process piping networks
- Tanks, reactors, and columns
- Injection and mixing skids
- Industrial maintenance and plant shutdown services

OUR GUARANTEES

- Dedicated HSE Manager
- Strict procedures and continuous quality inspections
- Safe interventions at SEVESO sites

After completing my Higher National Diploma (BTS) in Fabricated Metal Structures, I started my career as a pipefitter-welder on industrial construction sites. Very quickly, I realized that what motivated me most was engineering, production, and above all, customer satisfaction.

Today, as a Project Manager, I oversee the installation of new facilities, train teams in best practices, and ensure that every installation complies with the most stringent standards.

This profession requires a high level of discipline, but also strong interpersonal skills: listening to operators, understanding production constraints, and maintaining close communication with customers.

What I enjoy most is seeing a project progress from the quotation stage through to production, while ensuring safety and performance every step of the way.

The chemical industry is demanding but incredibly rewarding for those who enjoy learning and innovating every day

PATRICK GUINET

WHY AXE PROCESS?

Complete mastery of complex industrial environments, with total safety.
