

Pharmaceutical & Cosmetics

GMP Compliance and Process Flow Control

COMPLIANCE THAT BUILDS CONFIDENCE

INDUSTRY CHALLENGES

- GMP compliance
- Regulated process fluids (purified water, clean steam)
- Cleanrooms and controlled environments
- Validation and comprehensive documentation

AXE PROCESS EXPERTISE

- Clean and ultra-clean process piping systems
- Equipment integration in cleanrooms
- Custom process skids (mixing, transfer, CIP)

SOLUTIONS & CAPABILITIES

- PW (Purified Water) and WFI (Water for Injection) distribution systems
- Clean steam systems
- Cosmetic tanks and mixing vessels
- Liquid and semi-solid production lines

OUR GUARANTEES

- Complete manufacturing documentation packages
- Inspections and quality checks at every stage
- GMP-compliant documented procedures

I entered the piping industry at the age of 14, almost by chance, and quickly discovered a genuine passion that led me from boilermaking and industrial piping to mastering welding, earning several certifications in stainless steel, carbon steel, and specialty alloys.

Very early on, the pharmaceutical, food, and cosmetics industries became the natural focus of my career. These sectors demand precision, adaptability, and a thorough understanding of clients' requirements.

One project I remember particularly well was my first assignment as a Site Manager at IFS. Despite last-minute adjustments and tight deadlines, we

successfully delivered the project and received the client's congratulations—a defining moment in my career.

Those years in the field taught me as much about people as they did about technology. They ultimately gave me the confidence to establish my own company, alongside former colleagues who became partners—and even former managers who later became clients.

Even today, I summarize my professional philosophy with a phrase that has guided me since the beginning: "If it's worth doing, it's worth doing right."

SYLVAIN MARGAND

WHY AXE PROCESS?

The multidisciplinary expertise required to successfully deliver complex, highly regulated projects.
