Who We Are

AXE PROCESS is a company specialized in the design, manufacturing and installation of industrial piping, boiler making products, and metal structures. We support our customers from initial project assessment to implementation, with recognized expertise in the most demanding industrial environments.

OUR ROLE : TURNKEY INDUSTRIAL SOLUTIONS PROVIDER

Engineering > Design > Manufacturing > Assembly > Implementation > Inspection & Compliance

OUR VALUES & COMMITMENTS

Rigor & Reliability

Technical Expertise

Flexibility & Adaptability

End-to-End Industrial Solutions

Customer Centricity

OUR TEAM, OUR STRENGTH

AXE PROCESS

The Story of an Industrial Rise

In 2018, Sylvain Margand set himself a bold challenge: to become a fully integrated solutions provider, mastering every link in the value chain, from the very first sketch to on-site commissioning.

In 2021, Anthony Conte joined the adventure. With him, the project shifted to a new scale. Their expertise complemented each other, the vision became sharper, and the momentum accelerated. Together, they transformed this young Isère-based company into a player capable of supporting industrial clients in their most demanding projects.

Based in Vienne, Axe Process now brings together 80 employees and generates nearly 10 million euros in revenue, a quarter of which comes from exports. A trajectory owed not to chance, but to the determination of two men and their ambition to build a different kind of industrial partner — agile and visionary.

Inclusion, Talent & Learning

Developing Talent, Promoting Diversity, and Integrating Young Professionals

Each year, around ten apprentices and interns join our teams, benefiting from the guidance of dedicated mentors who are passionate about sharing their expertise and experience. Our goal is to prepare them to become confident, skilled professionals, driving a more innovative, inclusive, and sustainable industrial sector.

Our Business Areas

Industrial Engineering & Design Office

- Industrial facility design
- Systems integration

Industrial Piping

- Fluid networks (stainless steel, carbon steel, plastic...)
- Utilities (water, air, steam, vacuum)
- Clean & ultra-clean processes
- Certified welding & assembly
- Testing & quality control

Pressure Vessels & Metal Structures

- Load-bearing structures
- Tanks, skids, frames, conveyors
- Workshop design & fabrication
- On-site assembly

End-to-End Industrial Solution

- Full project management
- Multi-disciplinary coordination
- Industrial integration
- Operational launch & final acceptance
- Cost, time, and performance optimization
- Support from design to operational launch

MACHINERY & EQUIPMENT

2 Overhead cranes, 1 CAD Laser cutting bench, 1 Guillotine shear, 2 CNC press brakes, 1 3-roll plate bending machine, 30 TIG and orbital TIG stations, 10 MIG stations, 1 50-ton punch / notching machine, 1 Band saw, Surface treatment cabin: sandblasting and bead blasting

QUALITY & SAFETY

MASE Certification

QHSE Lead

Documentation, inspections, reports, and compliance at every stage

Strong Sector Expertise

Microelectronics

Process networks, fit-up & hook-up.

Pharmaceutical & Cosmetics

GMP requirements, cleanrooms, regulated fluids, quality, reproducibility, advanced fluid and flow control.

Food & Beverage

Sanitary standards, safety, full process traceability, critical operations.

Data Centers

Cooling networks, energy management.

Gigafactories / Batteries

Complex fluid infrastructures, high technical requirements.

Chemicals & Process Industries

Installations in regulated environments, certified under the MASE standard.
